

IN THE CLAIMS

Please amend the claims as follows:

Claim 1 (Currently Amended): A method of printing information comprising:  
transmitting information to be printed from a handheld computing device over a  
wireless connection to an Internet service provider;  
receiving, through the Internet service provider and by a wide area network, the  
information to be printed which was transmitted over the wireless connection;  
forwarding the same information transmitted from the handheld computing device to  
be printed over the wide area network to a printer; ~~and~~  
if the printer is available printing the forwarded information using the printer;  
if the printer is not available, saving the information in the handheld device, providing  
an indication of the printer not being available on the handheld computing device, allowing a  
user of the handheld computing device to delete the information to be printed, and if the user  
does not delete the information periodically attempting to resend the information to be  
printed to the printer.

Claim 2 (Previously Presented): The method according to claim 1, further  
comprising:

generating the information to be printed prior to transmission thereof.

Claim 3 (Previously Presented): The method according to claim 2, wherein the wide  
area network is the Internet and the generating comprises:

browsing the Internet for the information to be printed.

Claim 4 (Previously Presented): The method according to claim 3, wherein the browsing comprises:

shopping on the Internet.

Claim 5 (Previously Presented): The method according to claim 2, wherein the generating comprises:

generating the information to be printed using an e-mail program.

Claim 6 (Previously Presented): The method according to claim 1, wherein the forwarding includes:

controlling the printing using the Internet printing protocol (IPP).

Claim 7 (Previously Presented): The method according to claim 1, wherein the wireless mobile device is configured to transmit the information and the transmitting includes transmitting the information to be printed in response to a single user command.

Claim 8 (Previously Presented): The method according to claim 1, wherein the transmitting comprises selecting the printer connected to the wide area network in which to print to.

Claim 9 (Currently Amended): A system for printing information, comprising:  
a wireless handheld mobile device configured to transmit, over a wireless connection, information to be printed to an Internet service provider;

a wide area network configured to receive the information from the Internet service provider and to forward the same information transmitted from the handheld computing device to a printer configured to print the forwarded information; and

a controller configured to:

if the printer is available, print the forwarded information using the printer;

if the printer is not available, save the information in the handheld device,

provide an indication of the printer not being available on the handheld computing

device, allow a user of the handheld computing device to delete the information to be

printed, and if the user does not delete the information periodically attempt to resend

the information to be printed to the printer.

Claim 10 (Original): The system according to claim 9, wherein the wireless mobile device is configured to generate the information to be printed prior to transmission thereof.

Claim 11 (Original): The system according to claim 10, wherein the wide area network is the Internet and the wireless mobile device is configured to browse the Internet for the information to be printed.

Claim 12 (Original): The system according to claim 11, wherein the wireless mobile device is configured to enable a user to shop on the Internet.

Claim 13 (Original): The system according to claim 10, wherein the wireless mobile device is configured to generate the information to be printed using an e-mail program.

Claim 14 (Original): The system according to claim 9, wherein the wide area network is configured to control the printing using the Internet printing protocol (IPP).

Claim 15 (Original): The system according to claim 9, wherein the wireless mobile device is configured to transmit the information to be printed in response to a single user command.

Claim 16 (Previously Presented): The system according to claim 9, wherein the wireless mobile device is configured such that a user can select the printer connected to the wide area network in which to print to.
